This colour selector represents the core range of Monocouche render colours.

It is very important to note:

These colour representations are as close as printing techniques permit.

Colour appearance will vary naturally according to substrate, surface finish and orientation. In particular, scraped, smooth and sprayed finishes provide a slightly different aesthetic appearance. Even the same colour will vary in tone in these circumstances.

For the above reasons, final selection against an actual sample is strongly recommended. These are available from **weber**.
